

METHOD FOR ENHANCING CLIENT SIDE DELIVERY OF INFORMATION FROM A TRUSTED SERVER

Abstract

A system for and a method of enhancing information delivery to a client is disclosed. A operator at a server accesses at least one configuration file comprising instructions for displaying a URL at a given time and date. The server system time and date are verified and a configuration file is transmitted to the client, when the time and date function of the configuration file corresponds to the server system time and date. A document is displayed at the client based on a given system time and date.
